If you are talking about truly random numbers, then

there is no pattern created over time. In other words,

no matter how many random numbers you generate, there is no way to determine wh

at the next random number is. This is actually the definition of what a random n

umber is.

Software-generated random numbers only are pseudorandom. They

are not truly random because the computer uses an algorithm base

d on a distribution, and are not secure because they rely on deterministic, pred

ictable algorithms.
